Can you produce a list of universities in Hungary where mathematics and physics are being taught? If possible, group them whether the language of instruction in these subjects is English or Hungarian. My friend would be interested in tutoring students in those subjects and he may have an additional advantage in English.

Checking which Hungarian programs are taught in English ▸

I'll check current program listings to confirm which universities offer these programs in English.

Searched the web ▸

Both languages are used at Hungary's five major universities. The English-taught math and physics degrees are concentrated in those five, mostly at BSc/MSc level for international students.

English-taught math/physics programs

- **Budapest University of Technology and Economics (BME), Budapest**
  - Mathematics BSc in English. The admission test covers math and physics, is given in English, and weighs math more heavily. tpf
  - Mathematics MSc in English.
  - Since 2023 there is a Physicist-Engineer BSc in English (7 semesters), alongside a Hungarian-language Physics BSc (6 semesters). bme
  - Physics MSc in English, with specializations including solid state, quantum physics, nanotechnology, optics, nuclear and medical physics. scholarshipportal
  - From 2024/25, a Medical Physics MSc in English, the first and only one in Hungary. eduline
- **Eötvös Loránd University (ELTE), Budapest**
  - Physics MSc taught in English. The Institute of Physics offers its graduate and postgraduate programs in English. elte elte
  - Mathematics: BSc courses are in Hungarian by default, though some may also be offered in English. elte
- **University of Debrecen**
  - Mathematics BSc in English. bachelorsportal
  - Physics BSc in English. tpf
  - Physics MSc in English. stipendiumhungaricum
- **University of Pécs**
  - Mathematics BSc in English. pte
  - Physics BSc in English. stipendiumhungaricum
  - Physics MSc in English. pte
- **University of Szeged**
  - English programs are at graduate level only: Applied Mathematics MSc and PhD programs in mathematics and physics. The 2026 fee list also includes a Mathematics

MSc. u-szeged u-szeged

- **Budapest Semesters in Mathematics** (a study-abroad program, not a university)
  - An English-language program for American and Canadian undergraduates. It was founded by Paul Erdős, László Lovász and Vera T. Sós, and classes are held at College International. iup cornell
  - The students are native English speakers taking hard courses, which makes this probably the best fit for an English-speaking tutor.

Hungarian-language programs

- ELTE, BME, Szeged, Debrecen and Pécs all run their main math and physics BSc/MSc and teacher-training programs in Hungarian. For example, Szeged offers a Mathematics BSc, math teacher training, Mathematician MSc, Applied Mathematician MSc and a Mathematics PhD. Szeged also offers a Physics BSc, physics teacher training, Physicist MSc and Astronomer MSc. Debrecen has a Hungarian Physics BSc. Bolyai szorolap 2022 +2
- From general knowledge, not verified here: smaller regional universities also teach math and/or physics, mainly teacher training, in Hungarian. These include the University of Miskolc, Eszterházy Károly Catholic University (Eger), the University of Nyíregyháza, ELTE's Savaria campus (Szombathely) and the University of Pannonia (Veszprém). felvi.hu has the authoritative current list.

Tutoring market outside math/physics majors

The larger demand is probably students who must pass math or physics courses in other degrees:

- English-taught engineering programs at BME, Debrecen, Óbuda, Győr and others.
- The large English-language medical programs at Semmelweis, Debrecen, Pécs and Szeged, where first-year biophysics and medical physics are notoriously hard courses.

- Budapest Semesters in Mathematics (IUP)
- Budapest Semesters in Mathematics (Cornell)

A related question: are there universities with non-math and non-physics majors where students need to take these two subjects?

Searched the web ▸

Yes. Several large groups of non-math, non-physics students have to pass mathematics and/or physics courses, and many of them study in English.

Engineering (math and physics, typically 1–2 years of each)

- **BME, Budapest** has the biggest concentration. It teaches civil, mechanical, mechatronics, vehicle, environmental and chemical engineering in English, as well as in Hungarian, and has about 2,400 foreign students.
- **Óbuda University, Budapest** offers English-taught computer science engineering and environmental engineering.
- **Széchenyi István University, Győr** offers vehicle, logistics, civil, agricultural and food engineering BScs in English.
- **University of Debrecen** offers mechanical engineering in both Hungarian and English.
- **University of Szeged** offers English-taught food, mechanical, mechatronics and engineering-management programs.
- **University of Nyíregyháza** offers English-taught mechanical, vehicle and computer science engineering, plus a professional pilot BSc.
- **University of Pécs** offers architectural engineering in English.

Medicine, dentistry, pharmacy (physics/biophysics, some math)

- Four universities teach medicine: Semmelweis (Budapest), Debrecen, Pécs and Szeged, all with English programs.
- At Semmelweis, first-year English-program medical students take a course on the mathematical and physical basis of medical biophysics, followed by Medical Biophysics I and II.
- The other medical schools have equivalent first-year biophysics courses. These are widely considered among the hardest first-year exams and are a well-known tutoring market.
- Semmelweis, Pécs and Szeged also run full German-language medical programs. This would matter if your friend also speaks German.

Computer science, economics, chemistry, biology (mainly math)

- Computer science BScs, many in English, at Szeged, Debrecen, Nyíregyháza, ELTE and others require heavy calculus, linear algebra and discrete math.
- Applied economics in English at Corvinus and ELTE requires calculus, statistics and quantitative methods.

- Chemistry, biochemical engineering and agricultural engineering programs require introductory math, and often physics. Biochemical engineering is offered in English at Szeged and Debrecen; agricultural engineering in English at Debrecen and Nyíregyháza.

Practical takeaway
For an English-speaking tutor, the densest demand is probably first-year international students in two groups:

- Medicine/dentistry (biophysics) at the four medical schools.
- Engineering at BME.

Hungarian students in the same programs take the same courses, so Hungarian-language tutoring demand mirrors this.

> Could you investigate another angle, exemplified by the "repülőmérnöki szak" at the University of Debrecen? They do have international students and these students need to take math and physics, while their main interest is not the sciences or even engineering. Anything similar elsewhere in Hungary?

Searched the web ▸
The pilot programs fit this pattern well: students want to fly airliners, but the degree is formally an aeronautical-engineering BSc (*repülőmérnöki alapszak*), so they must pass engineering math and physics.

University-degree pilot programs (math/physics required)

- University of Debrecen
  - The Professional Pilot BSc is 7 semesters, taught in English, and run with Pharma Flight at Debrecen airport.
  - The program has since been renamed aeronautical engineering. Students have come from Azerbaijan, Bangladesh, Brazil, Japan, Yemen, Kyrgyzstan, Colombia, Kuwait, Laos, Pakistan, Serbia, Singapore, Thailand, Tunisia and Cape Verde.
  - Many students are on Stipendium Hungaricum scholarships. The first cohort of 30

included 28 scholarship holders.

- **BME, Budapest**
  - A self-funded Professional Pilot BSc in English, which started in September 2024.
- **University of Nyíregyháza**
  - The traditional civilian pilot-training center, with both English and Hungarian versions.
  - Its graduates typically become first officers at airlines, flight instructors, or commercial pilots at small aviation companies.
- **University of Dunaújváros**
  - Two English-language combinations: Mechanical Engineering BSc + pilot training, and Engineering Management BSc + pilot training (frozen ATPL).
  - Flight training is done with Multifly Aviation Academy in Őcsény.
- **Milton Friedman University, Budapest**
  - Advertised a Hungarian-language aeronautical engineering BSc run with Óbuda University. In 2025, however, the accreditation committee (MAB) did not support launching it, so its status is uncertain.

For scale, in the 2025 admissions round, first-choice applicants were 28 for BME's English program, 32 for Milton Friedman's Hungarian program, 44 for Nyíregyháza's English program and 12 for its Hungarian program. Total costs run to roughly 29–34 million HUF per degree. These are self-paying students with a lot riding on passing, which makes them a promising tutoring clientele.

Postgraduate pilot courses (probably less math/physics)

- **Széchenyi István University (Győr)**: a 3-semester English-language program with Wizz Air, open to graduates of any field, including humanities or economics.
- **Óbuda University**: a postgraduate program aimed at a CPL with instrument rating and ATPL theory.

These are not BSc programs, so the math load is likely lighter. ATPL theory still includes physics-heavy subjects such as principles of flight, so some demand probably remains.

Military aviation

- Military pilot and air traffic controller training is restarting after a 20-year gap, in Hungarian. From general knowledge rather than these sources, it is at the National University of Public Service.

Other programs with the same "science is a hurdle" pattern

- **Veterinary medicine, Budapest (University of Veterinary Medicine)**
  - Taught in Hungarian, English and German, with roughly 120 students per year in each foreign-language program.
  - First- and second-year subjects include physics and biomathematics.
- **Medicine, dentistry, pharmacy** (covered in my previous answer): biophysics is a first-year hurdle.
- **Architecture** (BME, Pécs, Szeged and others; from general knowledge): design-oriented students still have to pass math and structural mechanics.
